

MULTI-MEDIA ENHANCEMENT SYSTEM FOR FANTASY LEAGUES

Abstract

A1 multi-media enhancement for fantasy league operations. The present invention provides a multi-media enhancement for fantasy league operations such as the draft proceedings. A multi-media viewer displays audio, video and other information that relate to selected players as well as other related information or entertainment medium. The system can be used via DVD, CD as well as online or other network systems. It can be used as a stand alone fantasy draft system or to supplement other fantasy draft systems. Another enhancement may be used to allow team owners to download on-demand video and audio highlights to evaluate their players performance.
